AMENDMENTS TO THE CLAIMS

This list of claims will replace all prior versions and listings of claims in this application.

77. (Currently Amended) A make up composition for keratin materials comprising, in a cosmetically acceptable organic liquid medium, at least one film-forming linear ethylenic block polymer, wherein the at least one film-forming linear ethylenic block polymer has a polydispersity index of greater than or equal to 2.5 and comprises a first block and a second block with different glass transition temperatures (Tg) linked together via an intermediate block comprising at least one constituent monomer of the first block and at least one constituent monomer of the second block, wherein the at least one constituent monomer of the first block differs from the at least one constituent monomer of the second block, said intermediate block is a random copolymer block with a Tg that ranges from the glass transition temperature of the first block to the glass transition temperature of the second block, and the first block of the polymer is ~~chosen from:~~

~~a)~~ a block with a Tg of greater than or equal to 40°C, and the second block is

~~b)~~ a block with a Tg of less than or equal to 20°C,

~~c) a block with a Tg of between 20 and 40°C, and~~

~~the second block is chosen from a category a), b) or c) different from the first block, and~~

wherein the first block is derived from at least one monomer chosen from:

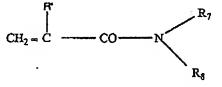
- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_1$

in which R_1 is chosen from a linear and branched unsubstituted C_1 to C_4 alkyl group and a C_4 to C_{12} cycloalkyl group;

- acrylates of formula $CH_2 = CH\text{-}COOR_2$

in which R_2 is a C_4 to C_{12} cycloalkyl group;

- (meth)acrylamides of formula:



in which R_7 and R_8, which may be identical or different, each are chosen from hydrogen atoms and linear and branched C_1 to C_{12} alkyl groups; or R_7 is hydrogen and R_8 is a 1,1-dimethyl-3-oxobutyl group, and R' is chosen from hydrogen and methyl,

wherein the second block is derived from at least one monomer chosen from:

- acrylates of formula $CH_2 = CHCOOR_3$,

wherein R_3 is chosen from a linear and branched C_1 to C_{12} unsubstituted alkyl group, with the exception of the tert-butyl group;

- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_4$,

wherein R_4 is chosen from a linear and branched C_6 to C_{12} unsubstituted alkyl group;

- vinyl esters of formula $R_5\text{-}CO\text{-}O\text{-}CH = CH_2$

in which R_5 is a linear or branched C_4 to C_{12} alkyl group;

- C_4 to C_{12} alkyl vinyl ethers,

- N-(C_4 to C_{12})alkyl acrylamides, such as N-octylacrylamide,

wherein the at least one film-forming linear ethylenic block polymer is a non-elastomeric polymer,

wherein the first block and the second block are incompatible in the organic liquid medium,

wherein the intermediate block does not comprise acrylates or methacrylates comprising a COOR side chain in which R comprises an intercalated heteroatom chosen from O, N and S, and

further wherein the make up composition for keratin materials has a mean gloss at an angle of 20° of greater than or equal to 30 out of 100, and a transfer index of less than or equal to 40 out of 100.

78. (Cancelled)

79. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the at least one film-forming linear ethylenic block polymer is an ethylenic polymer derived from aliphatic ethylenic monomers comprising a carbon-carbon double bond and at least one group chosen from ester groups -COO- and amide groups -CON- .

80. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the at least one film-forming linear ethylenic block polymer is not soluble at an active material amount of at least 1% by weight in water or in a mixture of water and of linear or branched lower monoalcohols containing from 2 to 5 carbon atoms, without pH modification, at room temperature (25°C).

81. (Cancelled)

82. (Cancelled)

83. (Cancelled)

84. (Currently Amended) The make up composition for keratin materials according to Claim [[83]]77, wherein the difference between the glass transition temperatures (Tg) of the first block and the second block is greater than 40°C.

85. (Cancelled)

86. (Cancelled)

87. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the transfer index is less than or equal to 30 out of 100.

88. (Previously Presented) The make up composition for keratin materials composition according to Claim 87, wherein the transfer index is less than or equal to 2 out of 100.

89. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the mean gloss measured at an angle of 20° is greater than or equal to 35 out of 100.

90. (Previously Presented) The make up composition for keratin materials according to Claim 89, wherein the mean gloss measured at an angle of 20° is greater than or equal to 60 out of 100.

91. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the mean gloss measured at an angle of 60° is greater than or equal to 50 out of 100.

92. (Previously Presented) The make up composition for keratin materials according to Claim 91, wherein the mean gloss measured at an angle of 60° is greater than or equal to 90 out of 100.

93. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the mean gloss measured at an angle of 20° is greater than 35 out of 100.

94. (Previously Presented) The make up composition for keratin materials according to Claim 93, wherein the mean gloss measured at an angle of 20° is greater than 75 out of 100.

95. (Cancelled)

96. (Cancelled)

97. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the at least one film-forming linear ethylenic block polymer has a polydispersity index that ranges from 2.8 to 6.

98. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the at least one film-forming linear ethylenic block polymer has a weight-average mass (Mw) of less than or equal to 300,000.

99. (Previously Presented) The make up composition for keratin materials according to Claim 98, wherein the weight-average mass (Mw) ranges from 35,000 to 200,000.

100. (Previously Presented) The make up composition for keratin materials according to Claim 99, wherein the weight-average mass (Mw) ranges from 45,000 to 150,000.

101. (Previously Presented) The make up composition for keratin materials according to Claim 99, wherein the number-average mass (Mn) is less than or equal to 70,000.

102. (Previously Presented) The make up composition for keratin materials according to Claim 99 , wherein the number-average mass (Mn) ranges from 10,000 to 60,000.

103. (Previously Presented) The make up composition for keratin materials according to Claim 102, wherein the number-average mass (Mn) ranges from 12,000 to 50,000.

104. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein said composition comprises from 0.1% to 60% by weight of active material of polymer.

105. (Previously Presented) The make up composition for keratin materials according to Claim 104, wherein said composition comprises 10% to 40% by weight of active material of polymer.

106. (Previously Presented) The make up composition for keratin materials according to Claim 105, further comprising at least one glossy oil in an amount of less than 30% by weight relative to the total weight of the composition.

107. (Previously Presented) The make up composition for keratin materials according to Claim 106, wherein said at least one glossy oil is present in an amount of less than 15% by weight relative to the total weight of the composition.

108. (Cancelled)

109. (Cancelled)

110. (Cancelled)

111. (Currently Amended) The make up composition for keratin materials according to Claim [[109]]77, wherein the first block comprises at least one monomer ~~at~~

~~least one monomer whose corresponding homopolymer has a glass transition temperature of greater than or equal to 40°C is~~ chosen from methyl methacrylate, isobutyl (meth)acrylate and isobornyl (meth)acrylate.

112. (Cancelled)

113. (Cancelled))

114. (Currently Amended) The make up composition for keratin materials according to Claim 112, wherein the second block comprises at least one monomer ~~at least one monomer whose corresponding homopolymer has a glass transition temperature of less than or equal to 20°C is~~ chosen from C_1 to C_{10} alkyl acrylates, with the exception of the tert-butyl group.

115. - 122.(Cancelled)

123. (Currently Amended) The make up composition for keratin materials according to Claim [[119]]77, wherein the proportion of the first block ranges from 20% to 90% by weight relative to the total weight of the polymer.

124. (Previously Presented) The make up composition for keratin materials according to Claim 123, wherein the proportion of the first block ranges from 50% to 70% by weight relative to the total weight of the polymer.

125. - 128. (Cancelled)

129. (Currently Amended) The make up composition for keratin materials according to Claim [[128]]77, wherein the second block comprises at least one monomer ~~at least one monomer whose corresponding homopolymer has a glass transition temperature of less than or equal to 20°C is~~ chosen from isobutyl acrylate, methyl acrylate and 2-ethylhexyl acrylate.

130. (Currently Amended) The make up composition for keratin materials according to Claim [[118]]77, wherein the proportion of the second block ~~with a Tg of less than or equal to 20°C~~ ranges from 5% to 75% by weight relative to the total weight of the polymer.

131. (Currently Amended) The make up composition for keratin materials according to Claim 130, wherein the proportion of the second block ~~with a Tg of less than or equal to 20°C~~ ranges from 25% to 45% by weight relative to the total weight of the polymer.

132. - 149.(Cancelled)

150. (Currently Amended) The make up composition for keratin materials according to Claim [[81]]77 wherein the first block and/or the second block comprises at least one additional monomer chosen from:

- ethylenically unsaturated monomers comprising at least one carboxylic or sulfonic acid function,
- ethylenically unsaturated monomers comprising at least one tertiary amine function, and
- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_6$

in which R_6 is chosen from a linear and branched C_1 to C_4 alkyl group, said alkyl group being substituted with at least one substituent chosen from halogen atoms;

- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_9$,

in which R_9 is chosen from a linear and branched C_6 to C_{12} alkyl group, said alkyl group being substituted with at least one substituent chosen from halogen atoms;

- acrylates of formula $CH_2 = CHCOOR_{10}$,

in which R_{10} is chosen from a linear and branched C_1 to C_{12} alkyl group substituted with at least one substituent chosen from halogen atoms or

R_{10} is a C_1 to C_{12} alkyl-O-POE (polyoxyethylene) with repetition of the oxyethylene unit from 5 to 30 times, or

R_{10} is a polyoxyethylenated group comprising from 5 to 30 ethylene oxide units.

152. - 153.(Cancelled)

154. (Previously Presented) The make up composition for keratin materials according to Claim 150, wherein each of the first block and the second block comprises at least one additional monomer chosen from acrylic acid, (meth)acrylic acid and trifluoroethyl methacrylate.

155. (Currently Amended) The make up composition for keratin materials according to Claim 150, wherein each of the first block and the second block comprises at least one monomer chosen from (meth)acrylic acid esters ~~and optionally at least one additional monomer~~.

156. (Cancelled)

157. (Previously Presented) The make up composition for keratin materials according to Claim 150, wherein the at least one additional monomer is present in an amount ranging from 1% to 30% by weight relative to the total weight of the first block and/or the second block.

158. (Previously Presented) The make up composition for keratin materials according to Claim 157, further comprising at least one dyestuff chosen from water-soluble dyes and pulverulent dyestuffs.

159. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the composition is in a form chosen from a suspension, a dispersion, a solution, a gel, an emulsion, a cream, a paste, a mousse, a dispersion of vesicles, a two-phase and multi-phase lotion, a spray, and a powder.

160. (Previously Presented) The make up composition for keratin materials according to Claim 159, wherein the composition is in the form of a paste chosen from a soft paste and an anhydrous paste.

161. (Previously Presented) The make up composition for keratin materials according to Claim 77, wherein the composition is in anhydrous form.

162. (Cancelled)

163. (Cancelled)

164. (Cancelled)

165. (Withdrawn-Currently Amended) A multi-compartment kit comprising:

a) a container comprising at least one compartment, the container being closed by a closing member; and

b) a make up composition for keratin materials placed inside the at least one compartment, wherein the composition comprises, in a cosmetically acceptable organic liquid medium, at least one film-forming linear ethylenic block polymer, wherein the at least one film-forming linear ethylenic blockpolymer has a polydispersity index of greater than or equal to 2.5 and comprises a first block and a second block with different glass transition temperatures (Tg) linked together via an intermediate block comprising at least one constituent monomer of the first block and at least one constituent monomer of the second block,

wherein the at least one constituent monomer of the first block differs from the at least one constituent monomer of the second block, said intermediate block is a random copolymer block with a Tg that ranges from the glass transition temperature of the first block to the glass transition temperature of the second block, and the first block of the polymer is ~~chosen from:~~

~~a)~~ a block with a Tg of greater than or equal to 40°C, and the second block is

~~b)~~ a block with a Tg of less than or equal to 20°C,

~~c) a block with a Tg of between 20 and 40°C, and~~

~~the second block is chosen from a category a), b) or c) different from the first block, and~~

wherein the first block is derived from at least one monomer chosen from:

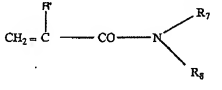
- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_1$

in which R_1 is chosen from a linear and branched unsubstituted C_1 to C_4 alkyl group and a C_4 to C_{12} cycloalkyl group;

- acrylates of formula $CH_2 = CH\text{-}COOR_2$

in which R_2 is a C_4 to C_{12} cycloalkyl group;

- (meth)acrylamides of formula:



in which R_7 and R_8, which may be identical or different, each are chosen from hydrogen atoms and linear and branched C_1 to C_{12} alkyl groups; or R_7 is

hydrogen and R_8 is a 1,1-dimethyl-3-oxobutyl group, and R' is chosen from hydrogen and methyl,

wherein the second block is derived from at least one monomer chosen from:

- acrylates of formula $CH_2 = CHCOOR_3$,

wherein R_3 is chosen from a linear and branched C_1 to C_{12} unsubstituted alkyl group, with the exception of the tert-butyl group;

- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_4$,

wherein R_4 is chosen from a linear and branched C_6 to C_{12} unsubstituted alkyl group;

- vinyl esters of formula $R_5\text{-}CO\text{-}O\text{-}CH = CH_2$

in which R_5 is a linear or branched C_4 to C_{12} alkyl group;

- C_4 to C_{12} alkyl vinyl ethers,

- N-(C_4 to C_{12})alkyl acrylamides, such as N-octylacrylamide,

wherein the at least one film-forming linear ethylenic block polymer is a non-elastomeric polymer,

wherein the first block and the second block are incompatible in the organic liquid medium,

wherein the intermediate block does not comprise acrylates or methacrylates comprising a COOR side chain in which R comprises an intercalated heteroatom chosen from O, N and S, and

further wherein the make up composition for keratin materials has a mean gloss at an angle of 20° of greater than or equal to 30 out of 100, and a transfer index of less than or equal to 40 out of 100.

166. (Withdrawn) The multi-compartment kit according to Claim 165, wherein the container is at least partially formed from at least one thermoplastic material.

167. (Withdrawn) The multi-compartment kit according to Claim 165, wherein the container is at least partially formed from at least one non-thermoplastic material.

168. (Withdrawn) The multi-compartment kit according to Claim 165, wherein in the closed position of the container, the closing member is screwed onto the container.

169. (Withdrawn) The multi-compartment kit according to Claim 165, wherein in the closed position of the container, the closing member is coupled to the container in a manner other than by screwing.

170. (Withdrawn) The multi-compartment kit according to Claim 169, wherein in the closed position of the container, the closing member is coupled to the container by click-fastening.

171. (Withdrawn) The multi-compartment kit according to Claim 169, wherein in the closed position of the container, the closing member is coupled to the container by bonding or welding.

172. (Withdrawn) The multi-compartment kit according to Claim 165, wherein the composition is substantially at atmospheric pressure inside the compartment.

173. (Withdrawn) The multi-compartment kit according to Claim 165, wherein the composition is pressurized inside the container.

174. (Withdrawn-Currently Amended) A cosmetic process for making up keratin materials, comprising:

application to the keratin materials of a make up composition for keratin materials;

wherein the make up composition for keratin materials comprises, in a cosmetically acceptable organic liquid medium, at least one film-forming linear ethylenic block polymer, wherein the at least one film-forming linear ethylenic block polymer has a polydispersity index of greater than or equal to 2.5 and comprises a first block and a second block with different glass transition temperatures (Tg) linked together via an intermediate block comprising at least one constituent monomer of the first block and at least one constituent monomer of the second block, wherein the at least one constituent monomer of the first block differs from the at least one constituent monomer of the second block, said intermediate block is a random copolymer block with a Tg that ranges from the glass transition temperature of the first block to the glass transition temperature of the second block, and the first block of the polymer is ~~chosen from:~~

~~a)~~ a block with a Tg of greater than or equal to 40°C, and the second block is

~~b)~~ a block with a Tg of less than or equal to 20°C,

~~c) a block with a Tg of between 20 and 40°C, and~~

~~the second block is chosen from a category a), b) or c) different from the first block, and~~

wherein the first block is derived from at least one monomer chosen from:

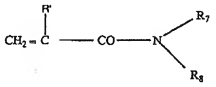
- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_1$

in which R_1 is chosen from a linear and branched unsubstituted C_1 to C_4 alkyl group and a C_4 to C_{12} cycloalkyl group;

- acrylates of formula $CH_2 = CH\text{-}COOR_2$

in which R_2 is a C_4 to C_{12} cycloalkyl group;

- (meth)acrylamides of formula:



in which R_7 and R_8, which may be identical or different, each are chosen from hydrogen atoms and linear and branched C_1 to C_{12} alkyl groups; or R_7 is hydrogen and R_8 is a 1,1-dimethyl-3-oxobutyl group, and R' is chosen from hydrogen and methyl,

wherein the second block is derived from at least one monomer chosen from:

- acrylates of formula $CH_2 = CHCOOR_3$,

wherein R_3 is chosen from a linear and branched C_1 to C_{12} unsubstituted alkyl group, with the exception of the tert-butyl group;

- methacrylates of formula $CH_2 = C(CH_3)\text{-}COOR_4$,

wherein R_4 is chosen from a linear and branched C_6 to C_{12} unsubstituted alkyl group;

- vinyl esters of formula $R_5\text{-}CO\text{-}O\text{-}CH = CH_2$

in which R_5 is a linear or branched C_4 to C_{12} alkyl group;

- C_4 to C_{12} alkyl vinyl ethers,

- N-(C_4 to C_{12})alkyl acrylamides, such as N-octylacrylamide,

wherein the at least one film-forming linear ethylenic block polymer is a non-elastomeric polymer,

wherein the first block and the second block are incompatible in the organic liquid medium,

wherein the intermediate block does not comprise acrylates or methacrylates comprising a COOR side chain in which R comprises an intercalated heteroatom chosen from O, N and S, and

further wherein the make up composition for keratin materials has a mean gloss at an angle of 20° of greater than or equal to 30 out of 100, and a transfer index of less than or equal to 40 out of 100.
